Preregistration Document: Mass AI Detection Project Preregistrations.pdf

Supplemental Information (Extended Methods): SupplementalInfo_ZhangEtAl_AIAgents.pdf — includes information for:

- Extended Methods
 - Description of AI Detection Tests and Failure Criteria
 - Method, Verified-Human (In-person) Participants
 - Method, Online Participants
 - Method, AI Agent Prompt Development and Data Collection (Including Open-Source Agent Framework)
 - Method, Adversarial Tests of AI Detection Tests
- Materials
 - AI Agent Prompts
 - Survey Questions
 - Adversarial Test of AI Detection Tests Without Knowledge or Feedback, Recruitment Email and Instructions
- Supporting References

Data Dictionary: ZhangEtAl Data Dictionary - Anonymized.pdf — includes definition and coding of each in-survey response, Qualtrics embedded data, and key variables (tests or checks) used in the analyses.

GUIDE-LLM: GUIDE-LLM-Checklist.pdf — A reporting checklist for large language models in behavioral science

Data Files & Analyses Scripts

→ located in: “Data + Analysis Code – Anonymized”

Script: MassAIDetection_PublicOSF.R — R script for data cleaning and structuring, and all analyses included in the paper and additional results. Commented throughout for readability and comprehension.

Note: We are not disclosing how the typing metrics were calculated, so these variables were precalculated and preincluded in the CSV. Please reach out to us for more information about typing metrics and for full access.

Data files are anonymized: no IP addresses (except for AI agents), location information, nor unique participant IDs from various platforms.

Mindworks (In-Person Verified-Human Participants Lab Sample)

→ located in: “Human In-Person Data”

Version 1: ZhangEtAl_AIDetection_HumanInPerson_Mindworks_Ver1_Public.csv

Version 2*: ZhangEtAl_AIDetection_HumanInPerson_Mindworks_Ver2_Public.csv

* Note: We pre-registered two versions of the survey, versions 1 and 2. Version 2 included an undisclosed AI detection test, not included in version 1. Data collection with the verified-human (in-person) sample revealed technical issues with the undisclosed AI test that prevented accurate data collection. Thus, we did not field version 2 of the survey on any online platform or through any AI agents.
